About us:

We are a Costa Rican company with over 18 years of experience in the Information and Communications Technologies market.

Our headquarters are located in San José, Costa Rica. In addition, we have Data Center infrastructures and connectivity in Costa Rica, Guatemala, El Salvador, Honduras, Nicaragua, Panama and Miami, Florida.

We are experts in technological convergence and integration and we have managed to earn the trust of our customers in more than 20 countries around the world via the wide range of solutions that we offer.

One of our main markets is Central America and this is why we created the concept of “ONE”, a “one-stop-technology-shop” in the region, making it possible for each of our clients to have a complete solution for all their technological needs in today’s changing digital world.

At the Connectivity level we have created 3 options under the concept of “CONNECT”, allowing our clients to have connectivity solutions in our Data Centers, for their Clouds and IOT services.

We work under our methodology “Make IT Happen”, meaning that we first focus on knowing and understanding our clients, and then provide them with reliable and safe solutions that are specific to their needs, using our infrastructure and technology to provide them with world class services and the best response times.

**makeIT
happen**

NAVEGALO ONE

ONE Internet

We provide **Carrier Class, Full Duplex, Point-to-Point Microwave and Fiber Optic** technologies via our MPLS network throughout Central America, which has been specifically designed for fast routing and redundancy.

We provide **SME and Corporate Internet and Data Transport** plans through our 100% wireless and fiber optic networks.

We have our own capacity on the MAYA, ARCOS and PAC submarine cables, with point of landings in Costa Rica at the Bribri station, located on the Atlantic Coast, and in Esterillos on the Pacific coast.

Towers property of Navévalo

In Costa Rica we have our own fiber optic network with connectivity throughout the country and also via wireless links through our 19 nodes.

ONE Data Center

We have **9 World Class Data Centers** in Central America and Miami, Florida; each with connectivity to the most robust Internet providers in the world, an uptime guarantee of 100%, redundant power and cooling, 24/7 security and support 365 days a year from our own Network Operations Center (NOC) and Security Operations Center (SOC).

Solutions:

Collocation: We provide space for collocation of equipment per server unit, in half cabinets, full cabinets, and in cages.

Navégalo Cloud: We provide solutions in our redundant and elastic cloud in a quick and profitable environment. Our clients can contract resources and create their own virtual machines themselves choosing to pay per hour or per month.

Virtual Servers (VPS): This solution is for clients that require their own resources, but do not need a dedicated infrastructure, offering a perfect balance between processing power, memory and disk space.

Dedicated Servers: An alternative for clients that require their own servers without having to purchase them, renting them from Navégalo with power, bandwidth and support included.

Web Hosting: The web hosting platform for the most robust websites and applications in the region, 100% customized to the needs of our clients, with personalized, fast and secure service and support.

Google GSuite: We are one of GSuite's largest partners in the region and we are experts at implementing these solutions.

Domain Registration: We provide our clients with a top notch domain registration service with more than 130 options including .com , .net, .org , .cr , .ni, .pa , .hn , .gt , .sv and .bz .

Secure SSL Certificates (Secure Socket Layer): We secure and encrypt your Internet transactions through the following premium providers: Symantec, Comodo , GeoTrust, Sectigo, Thawte, Rapid SSL and Digicert.

Storage and backup: We manage and implement backups of your platforms quickly, safely and reliably.

ONE Cloud

Our multi- cloud platform allows our clients to manage, from a single control panel, all their virtual machines from the following cloud platforms: Navégalo Cloud, AWS, Google Cloud and Microsoft Azure.

ONE IXP

Navégalo **Internet Exchange Point (IXP)**, the first and only in the region, is dedicated to improving the interconnectivity and reducing the costs between networks in Central America.

Navégalo IXP enables ISPs, content providers and companies to exchange IP traffic quickly, cost-effectively and easily.

Among its objectives:

- Make Internet routing more efficient.
- Improve the quality of services.
- Minimize interconnection costs in Central America and Panama.
- Accelerate local and regional Internet communications.
- Reduce the latencies of international terrestrial and / or submarine fiber optic links for members of Navégalo IXP.

ONE VoIP

We offer IP telephony solutions for SMEs and Corporations in Central America in search of products and services with high redundancy and security.

Solutions:

Telephone Lines: Our lines can be configured on voice over IP (VoIP) telephones, softphones or in virtual or physical PBXs.

Local and International Numbers: Our numbers are ideal for clients requiring local and international presence, allowing unlimited incoming calls and at local rates.

E1 SIP: Specialized solution for high traffic call companies that includes 30 channels and 100 local lines.

Virtual and Physical PBX: We offer two options, Cloud PBX which is managed and supervised by the Navégalo team, and physical PBXs which are ideal for medium and large companies that require an on-premise PBX .

ONE IPTV

Through Navégalo's Internet IPTV service, our clients receive over 100 Digital Channels and an IPTV box.

A single account allows you to configure the service on up to 3 devices – either on an IPTV Box , on a cell phone or on a tablet.

ONE Marketing

We offer the number one platform for sending SMS text messages and mass e-mails in Costa Rica, plus digital signage, website design and a " hotspot " solution for shops, hotels, restaurants and public spaces.

ONE Security

We provide cybersecurity solutions for global clients, protecting their critical information against DDoS attacks, so that their operations remain online 24 hours a day, 365 days a year.

- Protection against Layers 3/4 (volumetric) and Layer 7 (web applications) DDoS attacks.
- We can protect our clients' infrastructure through a block of IPs via BGP and / or a single IP.
- Protection against DDoS attacks directed at DNS servers.

ONE Licencing

We help our clients make smart licensing decisions based on the current and anticipated needs of their organizations.

We offer attractive pricing, predictable cost options and a range of added value benefits that reduce the cost of the acquisition, maintenance and updating of Oracle and Microsoft software.

NAVÉGALO CONNECT

Cloud Connect

We organize and consolidate the world's largest Cloud infrastructure networks in one easy-to-use platform.

No matter if you have hybrid solutions from various cloud providers, from cloud to cloud or for disaster recovery purposes, rather than managing each resource separately, gather everything together in the Navégalo ONE Cloud platform.

Data Center Connect

Our clients can choose to connect to the Internet provider of their choice, or use our Redundant Internet (BGP), managed 100% by Navégalo and backed by a 100% availability SLA.

IOT Connect

We interconnect different electronic devices (beacons , sensors, devices, electronics and other platforms) to provide new experiences and improvements through LORA communication.
