Digital Transformation Solutions

PTS Consulting is working hard to illuminate what value, digital transformation can bring to industries. We want to ensure that we empower people with smarter ways of doing business. Our goal is to bring a human experience to technological developments, providing ways for our customers to maximise value creation across asset and operations lifecycles while improving profitability.

Cloud Transformation

Cloud computing is already the next big wave in Information Technology industry and **PTS Consulting** has the necessary experience and expertise to help you make the transition to the Cloud. We offer cloud solutions for our clientele who are into Infra, Pharma, IT / ITES, BFSI, Public sector.

PTS Consulting helps you in bringing down the entire array of cloud computing sphere for your availability. For all the conventional local data centers your business has, **PTS Consulting** successfully takes them onto the Cloud.

We have adopted a customized approach to assimilate Cloud computing services to our clientele. We take up each client of ours on a personal basis, observe, analyze and understand the client's requirements and confinements. This is how we develop a tailor-made data migration plan to the Cloud.

We offer the most cost-effective and user-friendly **cloud hosting and computing services** to your business and we will help you successfully transcend your business to the Cloud.

Data Analytics

Information is one of the most important assets in any organisation and, in today's digitized world, the amount of data organisations have at their fingertips has never been greater.

PTS provides consulting services on data governance, analysis and mining, and visualisation. We use descriptive analytics, advanced big data solutions and predictive models to identify trends and patterns, define rules and provide insights using our visualisation engines for our clients to make informed business decisions. We can assist with:

Data Governance

We advise and guide our clients on adopting frameworks on how they collect and process, manage, store and utilise the data for better decision making. We assist in designing or improving the data architecture to provide single vision of the truth across the organisation.

Data Analysis and Mining

We help clients to identify inconsistencies and advise on the quality of data within the organisation. We use our machine learning, optimisation and modelling capabilities to create sense from machine data and advise our clients on appropriate strategy.

Data Visualisation

We use market leading tools to help clients visualise the patterns and trends and represent the meaningful insights that we spotted from the data. We can develop data models using bespoke analytics, provide clients with ready to use business intelligence dashboards specific to their function and industry sector for making informed business decisions.

Technologies we play with
